**The study of the Novel Coronavirus (2019-nCoV / SARS-CoV-2) N protein detection kit
performance Validation**

Product name: New Coronavirus (2019-nCoV / SARS-CoV-2) N Protein Detection Kit
(Fluorescence Immunochromatography)

Manufacturer: Beijing Savant Biotechnology Co., Ltd.

Address: 14#, 4F, No. 2 Kechuang East 5th Street, Tongzhou District, Beijing, China

CLIA Laboratory: Genview Diagnosis Inc.

Address: 5252 Hollister Street Suite 520 Houston TX 77040 USA

Operator: Dr. Jacky Deng

1. Purpose

For performance evaluation, verify the cross-reactivity with the reagent in study.

2. Material

2.1. All viruses are order from ZeptoMetrix Corporation (see attachment for detailed information)

2.2. Reagent

Table 2

	Reagent
Manufacturer	Beijing Savant Biotechnology Co., Ltd.
Product	New Coronavirus (2019-nCoV / SARS-CoV-2) N Protein Detection Kit (Fluorescence Immunochromatography)

2.3. Positive reference

Recombinant SARS-CoV-2 Nucleocapsid Protein purchased from RayBiotech (CODE: 230-01104).

3. Method

3.1 Pre-experiment: The recombinant N protein was diluted to 100ng/ml with the sample preservation solution provide with kit, the blank (sample preservation solution) and 100ng/ml samples were tested at the same time. If the blank sample was negative and the 100ng/ml sample was positive, the operation was continued 3.2 – 3.4. If not, find out cause.

3.2 The concentration of the sample to be tested (table 1) should be no less than 1×10^5 TCID₅₀/mL or 1×10^5 pfu/ml. If dilution is needed, the sample preservation solution in the kit shall be used;

3.3 The test was performed in three times. Please refer to the instructions for use of the kit.

3.4 If the test result is positive, there is a cross reaction between the reagent and the sample; If the test result is negative, there is no cross-reaction between the reagent and the sample.

4. Results and analysis

4.2. Analysis

It is verified that the test results of the pathogen/microorganism samples in Table 1 are all negative, indicating that there is no cross-reaction between the reagent and sample.

5. Conclusion

The results of cross-reactivity between the reagents and the pathogen/microorganism in Table 1 were all negative, showed that the specificity of the reagents was good and there was no cross reaction.
